Abstract of JP60260628

PURPOSE: The titled resis modifing excellent in gas barrier property, molstare imperameability and liquid barrier property and high in the production rate, prepared by forming a pleasme polymer find a specified monomer on the surface of a specified thermoplastic resis molding. COMSTITUTION: The desired themoglastic resis molding is obtained by coaling the surface of a molding of a test one thermoplastic resis neited of from among polycombonate resis, styrene resiss and polydefin resiss with a pleasme polymer film of all east one monomer selected from among leartinguoretyleviers, which is provided to the property of the pleasme polymer film of all east one monomer selected from among leartinguoretyleviers, of the pleasme film of the pleasme film of the pleasme selected from among or strations of the pleasme film of the pleasme of an interfal selected from among the surface of the more pleasme of an interfal sea such as he sign or a region.
